

Exact-Align HeNe Lasers

Red HeNe Lasers

Gammex 1A475 Crosshair

Gammex 1A618 Sagittal

Green HeNe

Gammex 1A480 Crosshair

Gammex 1A619 Sagittal

The GAMMEX Exact-Align HeNe lasers are the standard for patient positioning. The red turret style lasers project at 628.8 nm laser light which is highly visible in normal lighting conditions. The turret design allows for a line angulation capability of ± 45 degrees which means that the lasers can be mounted at an angle to the patient couch if necessary without requiring angle brackets. This direct wall mounting provides greater stability of the laser. The optical adjustments are easily accessible behind a secondary cover.

There is virtually no drift in this unit as well as a line of less than 1 mm at ten feet.

GAMMEX Green Exact-Align HeNe lasers project at 543.5 nm laser light which is visible on any skin tone. The high quality fine line of the green lasers also proves useful in situations such as stereotactic radiosurgery where precision positioning is critical. The green lines projected are "absorbed" into the skin which minimizes the "spattering" effect thereby maintaining the thinnest line possible.
