can do it all!

### **Astor**

The Astor diode laser is quickly becoming the laser of choice for thousands of institutions worldwide. The Astor offers internal beam focusing and six axis adjustments. Fine adjustments are performed with out removing the cover. All adjustment controls and electronics are contained within a compact housing. Only a small wall or ceiling mounting area is required. The laser can easily fit into the smallest recess.

The Astor green laser uses a yttrium-aluminum neodymium garnet pumped by a diode resulting in a green laser light with a wavelength of 532nm. The Astor comes with a mounting bracket allowing the laser to be mounted and rotated up to 45°.
